Important note

In case of loans in foreign currency, changes in exchange rates of foreign currency may affect the repayment of the loan. The interest amounts on loans are calculated based on the nominal interest rate. The nominal interest rate shows the amount of annual interest on the loan, which is charged on the loan balance on annual basis.

- In case of a legal entity - copy of the charter
- Financial reports (monthly, quarterly, annual) provided to tax authorities during the last 1 year and approved by the relevant tax authorities
- Records of revenues and expenditures for the last 6 months

Attention

The interest amounts are calculated based on the nominal interest rate. The nominal interest rate on loans measures the annual rate of interest for loan and is calculated against loan balance on a yearly basis.

Example of calculating interest amount

- Initial loan amount – AMD 10 000 000
- Loan period - 120 months
- Annual interest rate – 10,5%
- Manner of repayment of loan and interest – by annuity payments

Amount of monthly repayments shall make AMD 134,935.00

*** The interest amounts on loan are calculated based on the nominal interest rate. The effective annual interest rate on loans measures the real cost of credit after the interests are paid and other payments are made within the specified time and amounts.**

Formula for Effective Annual Interest Rate Calculation

The effective annual interest rate is calculated based on the following formula:

$$A = \sum_{n=1}^N \frac{K_n}{(1+i)^{\frac{D_n}{365}}}$$

where:

i – effective annual percentage rate (APR),

A - initial amount of loan to be disbursed,

n - number of the regular repayment on loan,

N - number of the last repayment on loan,

Kn- amount of the n-th regular repayment on loan,

Dn- time from the date of loan disbursement to the date of the n-th regular repayment on loan measured in

terms of days

i - effective annual interest rate can be calculated providing that the rest of equation data are known from loan agreement or otherwise.

To calculate the actual annual interest rate please use Effective Annual Interest Rate Calculator, with reference http://www.armbusinessbank.am/am/page/Crediting_.

Example of calculating the effective annual interest rate

In case of loans issued for real property acquisition

- Loan amount – AMD 25 000 000
- Loan period - 240 months
- Loan interest rate - 10,5%
- One-time fee for loan application review – AMD 5000
- One-time fee for loan servicing – AMD 40 000
- Costs associated with the assessment of collateral - AMD 25 000
- Notary's costs – AMD 25 000
- Costs associated with cadastral registration - AMD 72 000
- Uniform statement - AMD 10 000
- Costs associated with property insurance against fire and other hazards - 0,15% of the balance of loan amount
- Costs associated with accident insurance - 0,15% of the balance of loan amount
- Repayment of loan amount and interests – by annuity

The effective annual interest rate is 11,44 %

Given the amount, term of the loan, frequency of repayments and changes in the prices of other miscellaneous services, the effective annual interest rate on loan may vary from the above example.
